

Telenor leads the way

Norway's largest provider of telecom services, Telenor, was the third operator in the world to take full advantage of a sophisticated state of the art Inventory System, that could capture cables, manholes, junctions and other inventory elements on the physical layer. The process provided by ProCaptura speeded up the conversion throughput and secured higher data quality

SUMMARY

- Advanced quality control tools and procedures
- Automatic consistency checks

The task of converting existing network information to structured digital formats is enormous and vastly underestimated. By using ProCapturas efficient workflow, combining data from different sources and applying automatic control processes, many inconsistencies were eliminated due to improved data quality.

Complete production workflow

- Interactive control and edit functions
- Fast and effective data conversion
- Efficient process and workflow management
- Combine data from different sources
- High quality data levels
- Direct input to Inventory Systems
- Export to GIS
- Enhanced security due to cost effective in-country solutions
