

ProCaptura is now offering the same technology that has been available on the top of the line VLS series scanners for years.

The vacuum board feature is offered as an UPGRADE for all existing FB-III and FB-IV models.

# KartoScan® FB - V

- With this upgrade, you will achieve better scanning results when you scan originals that have been difficult to scan in the past.
- The vacuum board feature is designed to secure that originals stay flat during scanning. This is particularly important for originals on thick paper or metal base.
- The vacuum board will also ensure better quality scans of bulky paper and originals with crease marks and lines.
- The installation made by ProCaptura service engineers will turn your current FBIII or FBIV models into a permanent long lasting solution with vacuum mounting.

# Special offer for owners of ProCaptura FB scanner series

**SPECIAL OFFER – 36.000 € including On-Site Installation**
